Subject URGENT Fw: Dimock - Week 2 Data Update, etc.

Please review what has been posted on the FTP site and compare against what is ready to be uploaded.

To my knowledge, all R2 reports are uploaded, R9 should have Week#2 - I can upload the rest today; R3 - we should have all up there but let me know if we are missing a part, TA & PACE - please check what is considered final from Fred (I need to have EDDs with the report in order to upload). For these, please create separate folders so I can keep what has been uploaded already separate from new reports. If you look at the FTP site it is very clear when uploaded and what's available. For Micro - please verify where we are (these need EDDs so we will need to check with Kelley to see if we (OASQA) are creating the EDDs).

Are you available for the call? I can be available at 4pm.

Cindy

Subject: Dimock - Week 2 Data Update, etc.

Hi Fred and Cindy -

First, I want to thank you both for all your efforts in helping meet the deadline for finalizing the Week #1 data. I realize that we had some really tight deadlines to work with. The good news is that our R3 tox is currently reviewing the final Week #1 data and we are on target to release it early next week.

As you know, there we had some questions regarding holding times for some of the glycol and bacteria data. We worked out the final qualifiers for this data set. However, I would still like to have a short discussion regarding these issues to make should that we are all on the same page as we go forward.

Now for the bad news..... I need to talk to you about where we stand in terms of the Week #2 data set. (see attached table for list of locations sampled during each week). As a reminder, the Week #2 - final data to EPA tox by 3/13 and ready to go to residents no later than 3/16.

I have asked the SERAS folks to get back to me this afternoon to let me know where we stand in terms of getting the Region 2, 3 and 9 EPA lab data from the FTP site into Scribe. As we did with week 1, we will need the labs to provide a response to the SERAS project level review.

Based on the established TAT for the Tier 4 reports, I believe that ESAT should have received the TA and PACE data from the SDG sent at the end of week #2 by 2/27. I don't think that we have seen any of the subcontracted data on the FTP site yet. I would appreciate it if you could check to see whether ESAT has received this data yet and if so, what is the status of their review? I also need to know the status of Fort Meade's review of the bacteria data from NEL.

I know everyone is doing their best to expedite their review. Please continue to notify us as the data may be posted to the FTP site so that SERAS can be uploaded to SCRIBE and complete the project level review. I will send out an updated data summary this afternoon to note where the week #2 data review stands. However, it looks like we have a lot of work to meet the above deadlines.

I would like to have a call to discuss these issues. **Please let me know if you are available this afternoon - at 3:30 pm or 4:00pm.** Once I hear back - I will send out a call-in #.

THANKS! - Kelley
